My suggestion for you to send to Sean -

“Sean,

Thanks for bringing the wider team together today. It was a good session and exactly the right conversation to be having at this stage.

Haseeb, Karan and Ben clearly came prepared and asked all the right questions. Haseeb in particular raised some points that we'd like to follow up on properly about the platform architecture, where PULSE sits relative to your existing data infrastructure, and the differentiation question.

We'd welcome a separate session with him if he's up for it.

On next steps, our suggestion would be:

- A follow-up session with Haseeb and John Taylor to go deeper on the technical questions, we can work around whatever timing suits him*
- A brief call between you and I, or you, Olivier and I, to agree the path forward on the Discovery and whether there's anything you need from us ahead of your internal conversations*

We remain very keen to get this moving. The Discovery scope and timeline we proposed felt broadly right from the conversation today, though we noted your steer on port selection and will refine that before we next speak.

Thanks again Sean. Good to see the momentum building.”

Best regards

Follow Up Flag: Follow up
Flag Status: Flagged

Thanks John,

Hi Kieron – How much do you think Amplio would be a fit for this opportunity to manage the Rail Delay repay on a national basis? Volume of cases p.a. is 8-9 million cases

Consolidated Delay Repay Service — Procurement Summary

Who: Rail Delivery Group (RDG) / Rail Settlement Plan Limited, acting in conjunction with Network Rail's Fares, Ticketing & Retailing Programme.

What: A new consolidated Great Britain Delay Repay service, designed to sit under the emerging Great British Railways (GBR) structure.

Three lots:

1. Core DR platform — claims, case management, fraud, MI, lead integrator role £12.75M
2. Electronic Ticket Validation Database (eTVD) £720K
3. Print/postal fulfilment — vouchers, warrants, BACS payments £7.72M

Total: ~£21.2M (ex VAT), with a possible extension taking the full contract to 10 years (Oct 2026 – Sep 2036).

Key points:

- Max 4 suppliers per lot shortlisted; a single supplier can win both Lots 1 and 2
- Lot 3 may be dropped in favour of Crown Commercial/G-Cloud framework
- Solutions must be portable to GBR — this is explicitly an interim capability pending full GBR go-live
- Phase 2 scope (PAYG integration, processing centre) is flagged but out of this procurement

Timeline:

- Tender Notice published: ~20 April 2026
- Submission deadline (requests to participate): 22 May 2026
- Award decision: ~24 July 2026
- Award criteria: 70% quality / 30% price.

Best regards

To: John Taylor <Jonathan.Taylor@netcompany.com>; Andy Webb <andy.webb@netcompany.com>

Subject: Rail Delivery Group tender Delay repay

Who is our Mr. or Mrs. Amplio?

Lot 1 is a strong AMPLIO fit. The core requirement — high-volume claim intake, structured case management, rules-based decisioning, fraud controls, audit lineage, and multi-system integration — maps directly to what AMPLIO was built to do.

AMPLIO is Netcompany's own proprietary case management and process automation platform, production-proven at significant scale in complex, regulated environments. It processes close to one million cases annually in the Danish welfare system (social benefits, health insurance), has recently been selected for a 14-year contract with the Danish Customs and Tax Administration covering 500,000 cases/year across all tax domains, and is listed on the UK Government's Digital Marketplace (G-Cloud).

Specific AMPLIO capabilities that align to the Lot 1 scope:

- **Claim and case management** — caseworker task trays, real-time dashboards, task reservation/release, searchable case history
- **Rules-based decisioning (AMPLIO Decide)** — configurable decision trees and fraud/exception rules maintainable by business users without development effort
- **Audit and decision lineage** — per-task audit log built into the core design; directly relevant to the regulatory and compliance obligations of a national DR scheme

- **Integration at scale** — 100+ integrations across existing deployments; designed to connect to payments providers, ticket validation sources, print fulfilment, and retailer APIs — precisely the integration pattern required by RDG
 - **GBR portability** — AMPLIO is configurable, IP-free, and carries no vendor lock-in, directly addressing RDG's stated requirement for solutions that are "connectable and portable to the evolving GBR technology stack"
-

Suggested next steps

- Confirm internal appetite to pursue Lot 1 (and potentially Lot 2 in combination)
- Review the tender notice in detail ahead of the 20 April tender publication
- Prepare an expression of interest for submission by **22 May 2026**
- Consider whether a teaming partner is needed for the eTVD (Lot 2) or fulfilment (Lot 3) elements

Best regards

Hi Steve,

Really appreciated your time on Monday, apologies for the slow follow up, I was in Wales for the last 2 days. It was very useful to hear the operational picture on TOPS directly from you, rather than purely from the DDaT team. The context you gave on the decoupling challenge, the knowledge retention risk, and the container/multimodal gap was exactly what we needed to hear.

A few things we said we'd pick up:

From your side, when you get a moment:

- If you can find it and share it, the TOPS connectivity diagram, even a rough version would be enormously helpful as we think through the architecture
- A handful of DDaT contacts beyond Simon and Antony Walgate, for us to start building those relationships at programme level

From our side:

- I have reached out to Maggie at RFG and have been invited to the RFG parliamentary reception next week. I will get her perspective on what the freight operator community would want from a replacement
- I'll come back to you once we've sharpened our thinking a bit further, with something more formed on how we'd approach this
- And yes please on the control centre visit, seeing TOPS in live operation would be invaluable. Waterloo would work well for us if that's convenient your end – John and I would attend.

Thanks again, Steve. Good to meet you properly and looking forward to staying in touch as this develops.

Hi Mark,

Quick note to thank you again for your time yesterday. I enjoyed the conversation; I know I shared a lot of detail, but as we discussed, the industry's fragmentation makes these solutions naturally complex.

I'm looking forward to our follow-up in about three weeks. It'll be a great opportunity to get your take on things and hear more about your vision and priorities as you settle in.

On that note, I had a very interesting call with RDG and Steve Murphy at DfTO today. We were exploring ways to tackle and measure "micro-delays", I'd be curious to know if that's currently on your radar or if it aligns with your immediate goals.

I'll let you get away to enjoy your skiing next week! If you're open to it, perhaps we could aim for a catch-up the week commencing 9th March?

If that works, Leah can coordinate with your assistant to find a slot.

Olivier

Hi Olivier,

Thanks for your note. I am moving Patrick, Emil and Dan to BCC.

On the technical session, I will ask @Kate Mills to send some slots for w/c 25th March so we can have a quick high-level conversation. The deeper dive will need to wait until I have onboarded Wayne, our new Head of Digital, in early April. We will look to schedule that for late April or early May.

As for the session with the MDs, let's arrange that once we have completed the deep dive.

@Kate please can you include @Luke @Pankaj and @Richard in the session w/c 25th March?

Regards,

Kanwar

Subject: RE: [EXTERNAL] RE: Netcompany workshop

Hi Kanwar,

Thank you, really glad it landed well and great to hear you're already thinking about the May session with your **Bus MDs**, that would be the right room to bring the Copenhagen story into, and I want to make sure we frame it in the language of bus operations specifically (margins, franchise compliance, EV complexity) rather than just replaying the airport case study. We need to jointly battle test it before then, happy to co-design that once we've done the technical deep-dive.

On timing, your point about the new Head of Digital is well taken. I'd like to get the **technical deep-dive** done in March, before they arrive, so that PULSE is part of the foundation they walk into rather than something introduced afterwards. Can we find a slot in the second half of March? I'm flexible on format, half a day in London works well, or we can do it remotely if that's easier around your Fit for Future Growth commitments. Leah will coordinate on my side, just let us know who best to contact on your side.

I'll also get a Copenhagen date in Patrick's diary (Shannen if you don't mind helping with this?). That visit will set the scene nicely for your own deeper engagement with the platform when your diary opens up.

More to follow on GTS and the EV proof-of-value shortly.

Patrick, happy to follow up with GTS when you give me the nod.

Olivier

PS – moved André and Rich in bcc

Subject: Re: [EXTERNAL] RE: Netcompany workshop

Thanks all, excellent session on Friday. Strong platform, impressive team, and exactly the right strategic conversation!

@Olivier, thank you for capturing everything so clearly.

A few things from my side:

I'm looking to present the Copenhagen Airport story to our Bus Senior Leadership Team – I'll work with you on a May session with our MDs.

Our new Head of Digital joins in April, and I want them aligned with the PULSE concept early so it shapes our roadmap rather than runs alongside it.

On GTS, bus/EV proof-of-value, and Australia, all noted. Let me know where I can help. In Copenhagen, my diary is fully packed with our Fit for Future Growth transformation programme for the next couple of months, so please do get Patrick over when it works and we'll follow up with a technical deep-dive afterwards.

Really looking forward to seeing where this goes.

Subject: RE: Netcompany workshop

Dear Daniel, Patrick, Emil and Kanwar,

Thank you for making the time yesterday, it was a good conversation, and I think we can all agree it covered far more ground than any of us had anticipated when we walked in.

We were delighted to have André, Richard, and Christoffer with us, and the feedback we have received since confirms that the dialogue was valuable.

I wanted to capture the various threads we agreed to pull on, so that we move forward with the same shared understanding:

1. **Technical deep-dive with Kanwar:** We would like to sit down and first, explain the tech stack behind PULSE. We should also map your current architecture and the various in-flight

initiatives against what PULSE can absorb, consolidate, or enhance. The goal is to give you an honest view of where the platform adds the most immediate value and where your existing investments are best left to run. With your new Head of Digital joining in April, the timing feels right to do this before that agenda is set.

2. **GTS - Elizabeth Line use cases:** The conversation around GTS and the performance improvement programme, with TfL/RfLI, Network Rail all signed up as stakeholders, is exactly the kind of multi-party orchestration challenge PULSE was built for. I will follow up with Chris and Laura and explore what a focused innovation pilot could look like, one that does not disrupt ongoing operations but generates credible, referenceable evidence. I would appreciate a little nudge from Patrick to the GTS team.
3. **Bus and EV operations:** The picture Kanwar described, 70 or so data feeds, BetterFleet running in isolation, charging cycles disconnected from route planning, and the very real risk of a red-light scenario at 5am, is a problem we believe is solvable with an orchestration layer. We would like to propose a focused proof-of-value, potentially in London, that brings the IT, IoT, and OT layers together in one place for the first time. If we can demonstrate this on your fleet, it would be the first of its kind anywhere in the world, a compelling reference for future bids. I have attached the PDF of the paper I handed to you yesterday.
4. **Copenhagen visit:** Patrick, given your aviation background, and Kanwar, given your interest in the architecture, we would love to welcome you both to Copenhagen to see the AIRHART/PULSE platform in its live operational environment at the airport. Seeing 50 partner organisations coordinating in real time, across a genuinely complex ecosystem, tends to shift the conversation from the theoretical to the concrete very quickly.
5. **On the Australia front:** the Melbourne MR5 connection and the potential to use Elizabeth Line evidence within the consortium bid is something we think has direct value for your bid. We will think carefully about how Netcompany might contribute meaningfully to that story and there is a clear dependence on making something work quickly with your common partners within GTS.
6. **Norway** – Not discussed in much detail but the PoV is on the way and we will all keep an eye on it to see how things evolve. I'm always happy to go to Oslo and the team a hand.

Beyond the immediate next steps, I think what impressed us most about yesterday was the openness of the conversation, always a sign of a good fit. The challenge you described (multiple parallel initiatives, a growing EV fleet that has fundamentally changed what "operational planning" means, and the need for a single platform with real board-level discipline behind it) is one we have seen before, and one we know how to help address. The discipline point is as important as the technology, and we appreciated the honesty with which you framed it.

I will be in touch shortly to agree on dates and logistics for the technical deep-dive. In the meantime, please do not hesitate to contact me if anything comes to mind.

Hi Michael,

On the back of the email below, could we have a chat?

Will, who I've known for a while, had told me that he hasn't got a clear data strategy and with the new trains producing even more data, the problem becomes more acute. You may or may not know Netcompany. We are a digital transformation company originally out of Denmark. One of the solutions we have that seems to resonate very well with TOCS at the moment is our orchestration platform to get value out of data from siloed systems and siloed processes.

We can explain in much more detail when we meet.

If you're up for it, can you give me some dates for a quick chat? I'm in Derby, but John is in London.

Best regards

Hello Alex, Phil and Ernesto,

Ernesto and I met yesterday (thank you for your time). I have explained briefly what we had been talking about, and Ernesto would be happy to have a joint discussion to see if FS Advisory could provide part of the solution.

Happy for you guys to discuss between you two or be part of the discussion. Just let me know.

Hi Olivier,

Great to see you last week at Interchange.

Would be good to catch up sometime and see if we can work together at some point. I think we have complimentary services we can offer.

Let me know when you may have time - happy to come down to London or we have a office in Nottingham which may be more convenient for you?

Thanks,
Matt

Hi Steve, Sam,

Further to our call a couple of weeks ago, I've pulled together a short proposal for a minimum evidence sprint to quantify the seconds-level loss at stations and show how it compounds into measurable performance impact.

The pack is deliberately structured to stay out of industry process and start small:

- Phase 1 (low-cost entry): use existing feeds (TD/TRUST/BPLAN) to establish a robust baseline of stop-to-depart variance at a chosen station, plus a clear evidence artefact: variance heatmap, compounding model, top loss patterns.

- Phase 2 (only if Phase 1 shows the prize): add higher-precision event timing using existing CCTV to attribute variance to specific dispatch sequence components: door closure, final boarding, movement initiation , all with event timestamps only and no identity or biometrics.
- Phase 3 (optional): quantify corridor propagation and test the operational levers that would actually remove the seconds.

If this feels aligned with what you are working towards via the Rail Performance Board, the only things we need to kick off Phase 1 are agreement on a suitable target station, a nominated ops or performance contact who can sanity-check the outputs and a small budget to cover the costs. London Bridge, Cannon Street, and Charing Cross all look like strong candidates given the Southeastern relationship, service frequency, and existing CCTV coverage.

Happy to talk it through in 20 to 30 minutes and adjust the scope to make it as easy as possible to sponsor.

Olivier

Bonjour Guillaume,

Thank you very much for your time yesterday. Olaf and I enjoyed the discussion and hope you found it valuable.

I hope the session provided a clearer picture of what Netcompany stands for and what we can offer Keolis. We did pack a lot of discussion in a very short space of time.

I have attached the slides that we presented, and also the paper that I had shared with Chris previously to explain what orchestration can do in the context of railway.

As you rightly pointed out, while a metro system with 99.9% reliability leaves less margin for operational efficiency gains via orchestration, the concept is highly effective for rail, light rail, and, as you mentioned, electric buses.

We have agreed on the following next steps:

- You will come back to us after sharing our credentials with your colleagues in the context of your bid to **Metroselskabet**. Our footprint and reputation in Denmark could enhance your bid.
- We will organize a meeting with Pierre Gosset to talk about working with Keolis more widely and specifically looking at what our orchestration solution could bring in the context of **electric buses** (with disparate systems for battery management, charging management, fleet management, crew management, incident management, and so on – orchestrating these systems to improve operational efficiency and reduce operational costs does make sense).

Looking forward to further discussions. Let me know if you would like to add anything

Cordialement
Olivier

Bonjour Guillaume,

I was talking to Chris as per the email chain below, and he mentioned your name. I don't think we've come across each other in the past, I had left Alstom by the time you joined, but I did work on the MF2000 fleet...

I have recently joined Netcompany, which is a digital transformation company based in Copenhagen, really well known in Denmark. My role is to manage what we do in the rail industry. Chris told me that you are interested in the Copenhagen metro. I know it well. I spent the last four years at Hitachi also working with metro services.

Could we maybe do an introductory call?

Best regards

You don't often get email from olivier.andre@netcompany.com. [Learn why this is important](#)

Hi Chris,

Thanks for the feedback on the paper. I think you're the third person who reviews it externally...

There are several things we can do:

1. We can have a meeting around it to explain what it actually means in practice. If you have some slots when you return, we can get this organised
2. The door is open to visit Copenhagen Airport with the CEO, we do that quite a lot.
3. At some stage, I'm quite happy to facilitate a meeting with, for example, P&O Ferries, that we work with quite closely to explain how we work and what we do for them.

Confidentially, we are signing tomorrow this orchestration system for Heathrow, so we will have a really solid reference in the UK in addition to the work we currently do for National Highways, HMRC, Home Office, NHS etc.

If you think this is relevant for other people in Keolis, I'm more than happy to have a meeting with more than just the UK.

Regarding Copenhagen Metro/Scandinavia, if you could do an intro to Guillaume, that would be absolutely amazing.

Enjoy your holiday, and if you miss something at the dinner tomorrow, I shall let you know but I doubt it!

Hi Olivier,

I've just had a read of the paper, and to be honest I found it very engaging and of direct interest. I've been thinking for some time that there must be a better way of co-ordinating all the decision making and communications (phone calls, emails.... shouting across control room desks etc.) that happen to provide customers with better real time information.

I'd be interested in hearing more, in relation to some UK projects we have coming up. In terms of Scandinavia, then Guillaume Berne would be the right person to speak to. For France I'll see who is best to speak to in Pierre Gosset's team.

Unfortunately I'm not at the dinner tomorrow night. We're off on Holiday early Friday morning, so it was one dinner too many for this week!

Hi Chris,

These are my contact details below. I've been trying to get in touch with Keolis to see if what we do would be of interest to them. We're having some really good discussions with your competitors in various countries and I thought that given the footprint of Keolis Worldwide, we could have a decent conversation.

Just so that you have an idea of what I want to talk about, I've attached a very draft version of a paper that I'm currently discussing with NS in the Netherlands. Not everything in there is obviously applicable to operations at Keolis, especially when it's aimed at a national mainline rail operator but we have proven that the concept is very valid in all sorts of operational environments.

We started deploying all of this in airports environment with great success, now Ferries, supply Chain and I personally think there is a very high relevance to public transport and Rail and light rail in particular.

I'd be grateful if you could put me in touch with people who would be interested in this topic of optimizing operations through orchestration of operational systems.

Best regards
